

**Technical Meeting Presentation, September 28<sup>th</sup>, 2020, Monday, 7:00 PM**

**Location: Online**

**TOPIC: THE FUTURE OF GLOBAL SUPPLY CHAIN**

**ABSTRACT:**

The current pandemic has impacted the world in a very short timeframe. Industries and individual organizations that haven't been agile and able to adapt, have been hit the hardest. And weaknesses of the globalized supply chains were exposed. Brick and mortar stores are closing as they cannot compete with e-commerce. Projects that rely mainly from overseas supply are much affected by quarantine and healthy safety protocols. As a result, additional risks factors are now being considered for future projects. This presentation will cover the Supply Chain in Pre-Covid-19 era, the just-in-time inventory system, the current global supply chain situation and the future of the global supply chain. Links related to this topic are made available at the end of the slides for future reference.

**Presenter: HAMMAD MAZHAR**

Hammad Mazhar is a project control professional with over six years of experience in Project Controls, consulting and construction industry. His experience in construction has encompassed infrastructure and transportation construction and P3 projects. He has also worked in environmental projects providing remediation and reclamation services. Hammad holds a Bachelor of Commerce from the University of Alberta, and a certified Project Management Professional (PMP). Hammad has a wealth of experience in Program Management, Cost Controls, Change Management, Project Controls and Business Analytics. He has been a member of AACE since 2016 and is currently serving the Aurora-Edmonton Section Board as Director-At-Large.
